Aleksa Nesic

Frontend Engineer (Vue.js, Nuxt, TypeScript)

Belgrade, Serbia | anesic9@gmail.com | linkedin.com/in/aleksanesicsd | github.com/Neshke | aleksanesic.netlify.app

Summary

Frontend engineer who has built Vue.js and TypeScript web apps professionally since 2022. At Euronet Worldwide I worked on the money transfer apps of XE and Ria, and was one of the main developers on XE's migration from Vue 2 and Vuex to Vue 3, Pinia and TypeScript. In 2026 I co-founded Fair Assistant and built it with AI coding agents: an Android app on Google Play (about three months from first commit to public release), a Nuxt 4 team dashboard, a Nuxt website in 22 languages, and a Node.js and PostgreSQL API. Looking for a senior frontend or full-stack role, remote from Belgrade (employment, EOR or B2B contract) or hybrid in Belgrade.

Experience

Technical Lead and Co-founder

Aug 2026 – Present

Tehnokan d.o.o. (Fair Assistant)

tehnokan.com

Fair Assistant is Tehnokan's business card scanner for trade show exhibitors, live on Google Play with in-app purchases (fairassistant.com).

- Set the product and architecture direction and ran implementation through parallel Claude Code agents: specs and API contracts first, then code review and passing tests before every merge. First commit to public Google Play release took about three months.
- Designed the 10 screens of the team web dashboard and built it as a Nuxt 4 single-page app in TypeScript (app.fairassistant.com). The phone passes the team key to the browser through a QR code and an ECDH P-256 key exchange, and contacts are decrypted in a Web Worker and never stored unencrypted. Playwright end-to-end tests run against a mock API.
- Redesigned fairassistant.com in Nuxt with server-side rendering: 22 languages, a trade fair directory, and server-side caching for fair listings and sitemaps. Pricing pages show live Google Play prices for 174 regions.
- Built the licensing and payments API in TypeScript on Node.js 24, Fastify 5 and PostgreSQL 17, contract-first from an OpenAPI 3.1 spec. It covers Google sign-in, Google Play purchase verification, signed license tokens (JWS), team seats and rate limiting. Nearly 1,000 Vitest tests run on PGlite (PostgreSQL compiled to WebAssembly). In production since September 2026, with Sentry and daily backups to Cloudflare R2.
- Built end-to-end encrypted contact sync. Contacts are encrypted with AES-256-GCM on the phone, the key stays in the user's Google Drive app data, and team keys travel only inside a QR invite. The server stores only ciphertext and metadata.
- Shipped the Android app in Kotlin and Jetpack Compose (MVVM, StateFlow, Room, CameraX): offline scanning with on-device ML Kit text recognition for Latin, Chinese, Japanese, Korean and Devanagari scripts, 22 languages, Google Play Billing, over 2,000 unit tests and Maestro end-to-end flows. An iOS version in SwiftUI, sharing business logic through Kotlin Multiplatform, is in development.
- Added AI card reading on Gemini vision models with structured JSON output. Answers were coming back with 3 of 12 fields; I traced it to the alphabetical field order of the response schema and fixed it with an explicit property order. Answers now return 11 or 12 of the 12 fields, in 1.4 to 2.7 seconds.

Software Engineer

Jan 2022 – Aug 2026

Euronet Worldwide

Frontend for the money transfer web platforms of XE and Ria Money Transfer, plus work for epay. Scrum teams with Jira and GitHub Actions.

XE xe.com

Vue 3, TypeScript, Pinia, Tailwind CSS, Vitest, Cypress

- Built XE's web platform from the ground up as part of a Scrum team, with a focus on the integrity of financial data.
- One of the main developers on the migration from Vue 2 and Vuex to Vue 3 and Pinia, and from JavaScript to TypeScript, in a team of 10.
- Wrote unit and end-to-end tests with Vitest and Cypress and ran CI/CD on GitHub Actions.
- Improved load performance with lazy loading and code splitting.
- Handled localization for a global product with vue-i18n and Lokalise.
- Integrated Segment and LogRocket for product analytics and session replay.
- Contributed to the app's re-architecture and its component design patterns.

Ria Money Transfer riamoneytransfer.com

Vue.js Composition API, Vuex, Tailwind CSS

- Built features for Ria's money transfer platform and managed complex application state in Vuex.
- Moved styling from SCSS to Tailwind CSS and enforced code style with ESLint and Prettier.
- Reviewed code with a focus on security and business logic.

Projects

Tehnokan company website tehnokan.com

Website of my company Tehnokan d.o.o., built in Vue.js, TypeScript and Tailwind CSS.

Nexton e-commerce github.com/Neshke/nexton-ecommerce-FE

Full-stack online shop with a Vue 3 and TypeScript frontend and a PHP and MySQL backend: product management, cart and user authentication.

Mini Health App gitlab.com/Neshke/mini-health-app

Android app in Kotlin with Firebase that tracks daily steps and physical activity.

Skills

Frontend: Vue.js 3 and 2 (Composition API, Options API), Nuxt 4 (SSR and SPA), TypeScript, JavaScript, Pinia, Vuex, Vue Router, Vite, Tailwind CSS, SCSS, Vuetify, HTML, CSS, vue-i18n, Lokalise, Web Crypto API, Web Workers, IndexedDB

Testing and quality: Vitest, Cypress, Playwright, unit and end-to-end testing, ESLint, Prettier, code review

Backend: Node.js, Fastify, PostgreSQL, REST APIs, OpenAPI, Zod, JWT and JWS

Mobile: Kotlin, Jetpack Compose, Room, CameraX, ML Kit, Google Play Billing, Kotlin Multiplatform

Tooling: Git, GitHub Actions (CI/CD), Docker, Sentry, Segment, LogRocket, Jira, Agile/Scrum

AI: Claude Code agent workflows, Gemini API (vision, structured output)

Education

BSc in Computer Science and Software Engineering 2017 – 2021

Faculty of Technical Sciences Čačak, University of Kragujevac

Patent

Microcloud system for data storage over the Internet

Serbian petty patent RS 1753 U1, published April 2022. Co-inventor, listed first. A cluster of Raspberry Pi computers that stores data and serves users' requests over the internet. Patent holder: Faculty of Technical Sciences Čačak.

Languages

Serbian (native), English (fluent, C2)
